Proposed action for the B.S. Dietetics Program
Submitted by Nancy Schofield, consultant

NOTE: This includes a new category of status report – an abbreviated status report

The PRC review of the Dietetics B. S. Program took place during the 2004-2005 school year. The Dean’s response to the PRC’s report was accepted and action taken by the PRC on January 27, 2006. The PRC is requiring an abbreviated status report on unresolved issues to be filed in three years. Other than provide direct answers to certain questions, no surveys will need to be administered and no major reports are required.

The abbreviated status report will consist of the applicable college or office responding to the following questions during the Fall of 2008. The program director of the Dietetics Program is asked to answer all of the following questions. If an issue has not been resolved, the relevant Department Chair and, if necessary, Director or Dean will be asked to submit an explanation for that question.

1. What is the status of the requested professional counseling center? Where is it located? Is it adequately furnished (including equipment)? Is there sufficient support staff for operation? Describe how the facility is being used.

2. Is Careers Services able to provide the needed support to assist Dietetics students in receiving competitive internship placements?

3. Are Dietetics students able to take the needed science courses? Are the needed courses offered at least once a year? Is the enrollment in these courses sufficient for the number of students who need to take it each year?
   - BIO-234 Physiology and Anatomy for Health Sciences
   - CHEM-125 Principles of Chemistry for Health Sciences
   - CHEM-311 Biochemistry

The answers and explanations are due to the PRC by December 1st, 2008.
