

Where are they now?

10/2/2006

Dear Applied Science Faculty & Staff,

I am currently pursuing a **Ph. D.** in Cellular Biology and Genetics at Mayo Graduate School, in Rochester, MN.

This past summer I was a part of the Vaccine Research Group. We are growing mumps virus and developing a new method to detect this virus in clinics. This new method is called **swish-and-spit**, and will be a handy way to collect and analyze samples, from children to adults.

I am currently taking classes, researching common fragile site genes and cancer, and serving as **First-Year Representative** of my class. In two months, I will begin my final lab rotation in the Zebrafish Laboratory.
