

# DIGITAL HUMANITIES

## What will you do with technology?

The Digital Humanities is the newest field of research and innovation at UW-Stout. Students working in this new concentration will bring computing technology to bear on the "Big Questions." You will search for answers to questions that drive you.

## Literature? History? Anthropology? Yes.

In the Digital Humanities concentration you choose your field of interest from any offered on the Stout campus. You'll combine those courses with some Computer Science offerings, and base it all on a solid foundation in writing, design, and rhetoric. Then you'll be ready to use those tools to tackle your own original research.

## Your own ground-breaking research

After a course in research methods, you will spend a semester preparing a research proposal. In it, you will identify a problem, an opportunity, or an unasked question to which you want to find an answer. Then you will spend a semester bringing technology, and your own skills in research, analysis, and communication, to bear on fulfilling your project.

## A final product that will open doors

The culmination of your year-long research project will be a cutting-edge digital artifact that will constitute the centerpiece of your portfolio. Prospective employers will see what you are capable of; graduate school admissions committees will see what you are prepared to do. The digital world of the future belongs not to those who simply master tools, but to those who understand how technology affects the ways people communicate, interact, and comprehend the world.

A degree in the Digital Humanities puts you at the forefront of technological innovation, and gives you the tools to stay there. It's a combination that employers will find compelling.

## Why Stout?

A Bachelor of Science degree in Professional Communication and Emerging Media with a concentration in Digital Humanities will:

- Prepare you to enter a cutting-edge discipline;
- Provide you with a portfolio of original and compelling research that will impress hiring managers;
- Give you the skills to recognize trends in technology and understand how to put them to use.

## Careers

- Web content manager
- Multimedia producer
- Communications strategist
- User experience specialist
- Content producer
- Researcher
- Digital trends analyst
- New media specialist
- Humanities computing
- Graduate study
